Apply Dimensionality Reduction on Adult Census Income

Dataset and analyze the performance of the model

Date of Performance: 04/09/2023

Date of Submission: 13/09/2023

Department of Computer Engineering

Aim: Apply Dimensionality Reduction on Adult Census Income Dataset and analyze the

performance of the model.

Objective: Able to perform various feature engineering tasks, perform dimetionality reduction

on the given dataset and maximize the accuracy, Precision, Recall, F1 score.

Theory:

In machine learning classification problems, there are often too many factors on the basis of

which the final classification is done. These factors are basically variables called features. The

higher the number of features, the harder it gets to visualize the training set and then work on

it. Sometimes, most of these features are correlated, and hence redundant. This is where

dimensionality reduction algorithms come into play. Dimensionality reduction is the process

of reducing the number of random variables under consideration, by obtaining a set of principal

variables. It can be divided into feature selection and feature extraction.

Dataset:

Predict whether income exceeds \$50K/yr based on census data. Also known as "Adult" dataset.

Attribute Information:

Listing of attributes:

>50K, <=50K.

age: continuous.

workclass: Private, Self-emp-not-inc, Self-emp-inc, Federal-gov, Local-gov, State-gov,

Without-pay, Never-worked.

fnlwgt: continuous.

education: Bachelors, Some-college, 11th, HS-grad, Prof-school, Assoc-acdm, Assoc-voc, 9th,

7th-8th, 12th, Masters, 1st-4th, 10th, Doctorate, 5th-6th, Preschool.

education-num: continuous.

marital-status: Married-civ-spouse, Divorced, Never-married, Separated, Widowed, Married-spouse-absent, Married-AF-spouse.

occupation: Tech-support, Craft-repair, Other-service, Sales, Exec-managerial, Prof-specialty, Handlers-cleaners, Machine-op-inspct, Adm-clerical, Farming-fishing, Transport-moving, Priv-house-serv, Protective-serv, Armed-Forces.

relationship: Wife, Own-child, Husband, Not-in-family, Other-relative, Unmarried.

race: White, Asian-Pac-Islander, Amer-Indian-Eskimo, Other, Black.

sex: Female, Male.

capital-gain: continuous.

capital-loss: continuous.

hours-per-week: continuous.

native-country: United-States, Cambodia, England, Puerto-Rico, Canada, Germany, Outlying-US(Guam-USVI-etc), India, Japan, Greece, South, China, Cuba, Iran, Honduras, Philippines, Italy, Poland, Jamaica, Vietnam, Mexico, Portugal, Ireland, France, Dominican-Republic, Laos, Ecuador, Taiwan, Haiti, Columbia, Hungary, Guatemala, Nicaragua, Scotland, Thailand, Yugoslavia, El-Salvador, Trinadad & Tobago, Peru, Hong, Holand-Netherlands.

Conclusion:

confusion matrix [[7012 398] [1334 1025]] precision recall f1-score support <=50K 0.84 0.95 0.89 7410 >50K 0.72 0.43 0.54 2359 0.82 9769 accuracy macro avg 0.78 0.69 0.72 9769 weighted avg 0.81 0.82 0.81 9769

Logistic Regression accuracy score with the first 12 features: 0.8227

- 1. **Accuracy**: It may increase or decrease based on how well reduced features capture data patterns. Your model has an accuracy of 0.8227, meaning it's correct in about 82.27% of predictions using the first 12 features.
- 2. **Precision**: It measures true positive predictions to all positive predictions. Reduction may lead to less precise distinctions between true and false positives. In your report, precision for the ">50K" class is 0.72.
- 3. Recall: It gauges the ability to identify actual positive instances. Dimensionality reduction may result in missing some positives. Your ">50K" class has a recall of 0.43
- . 4. **F1 Score:** The harmonic mean of precision and recall. It decreases if precision or recall is affected. Your ">50K" class has an F1 score of 0.54
